

Questions and answers

Question	Answer
Awesome to see the integration with M3. Is it also possible with LN in the Cloud?	Yes, of course, we just picked M3 as one example for our integration.
I assume you are using BODs. Can all product using BODs be connected?	Yes, we are using BODs for the data flows between d/EPM and ERP. All Infor solutions communicating with BODs can be connected.
In our ERP we only have flat structure as you said. We would look for reports from different POVs. Form segments, entities or others. Is it possible?	In d/EPM we can build up several hierarchies and can map data to whatever view you would like to see. It is only a question of mapping. So, yes, it can be done.
You mentioned Segregation of duties. How do you monitor the system?	We are monitoring all relevant systems. All transactions are uploaded to data lake and can be monitored against underlying rules books. In these rule books you can determine conflicting roles. Conflicts would be notified and if necessary corrected.
Second question: Do you have rule books for LN?	Yes, there are rule books for Authentication Insights and Process Insights. All rule books can be extended to your special needs.
Are the other parts of this webinar series still available to watch?	Yes, all sessions are recorded and available for review from the webinar series home page: https://pages.infor.com/hfe-pm-webinar-d-EPM-v-12-webinar-series.html
